

Donation of pots and pans, to Teen Unit, Tangaroa College, East Tamaki, from JP Enterprises.

- and surgical discharges. More complex procedures are given a higher weighting, enabling analysis of complexity as well as the number of people discharged
- For CMDHB residents the WIES increase from 2005/06 was 28.2% and the discharge head count a staggering 35.6% increase on the previous year
- CMDHB continues to maintain green status across all Elective Service Performance Indicators. The MOH released ESPI results also shows improvement in the level of the achievement across all indicators
- The target cataract initiative volumes were well exceeded
- However, the continuing shortage of hip and knee patients has impacted the final end of year volume for the orthopaedic joint initiative. Average wait times from assessment to treatment is currently at only 12 weeks for these conditions with access thresholds being the lowest across the wider Auckland region which is positive for our community
- CMDHB is also improving the proportion of services which are at or above national access levels. Refer graph to the right and the Statement of Service Performance Section under Outcome 5 relating to standardised discharge ratios.

Elective procedure SDR CM v all NZ
